

Overview of Value Creation

Products

The compound and film products offered by the RIKEN TECHNOS GROUP are transformed into various components to provide comfort to users. Here, we introduce some of those products.

1 Compound for Wire Harness Coating

A wire harness is a composite product that bundles multiple electric wires used for power supply and signal communications and performs the role of connecting different devices. Our products boast stable quality and high market shares, supporting automobile and motorcycle production globally.

2 Compound for Dust Boots

Dust boots are covers that protect vehicle components. Thermoplastic elastomers are widely used for automobile components. They are used for various functional components as they offer resistance to heat and oil. Excellent in weight reduction and recyclability, they are also becoming widely used as materials that can limit CO₂ emissions.

3 Film for Automobile Windows

These are heat insulation films applied to automobile window glass. ICE-μ® features high thermal insulation and transparency, creating a comfortable vehicle interior space. Application on the windows of EVs, for which cooling and heating efficiency is even more important, is expected in the future.

4 Compound for Power Cable Coating

Power cables supply electric power. Our products are used as coating materials to protect various cables including general electrical wires as well as cables used with solar power generation and EV charging. We have products with diverse characteristics including fire resistance and heat resistance.

7 High-end Wall Covering Film

These decorative films have functions such as design, weather resistance, stain resistance, antivirus properties, and good workability. They are used in commercial facilities such as hotels as well as many interior spaces to create a beautiful finish.

10 Wrap for Food Packaging

These are films used to package foods and ingredients. The commercial-grade wraps are used primarily in supermarkets to package fresh foods, while small-roll wraps are widely used in settings ranging from household to professional kitchens. The environmentally friendly product RIKEN WRAP BOTANICAL® uses biomass resin.

5 Compound for PVC Window Frames

These products are used in the resin frames of windows. They feature excellent thermal insulation compared to aluminum sashes, and consequently, have CO₂ reduction effects. Resin sashes are durable and lightweight and provide surface functions with excellent stain resistance as well as design features.

8 Building Window Film

These films are applied to window glass in residential and commercial buildings. We offer grades with various functions such as UV ray reduction, shatter prevention, crime prevention, thermal insulation, hydrophilic properties, antifogging properties, antivirus properties, and decorative functions.

11 Compound for Food Cap Sealing

These food sealing products provide excellent leak resistance and sealing properties. Since the products come into contact with food, they must be safe and sanitary. LEOSTOMER® is used in a wide range of applications such as beverages and toys for infants.

6 Decorative Kitchen and Furniture Film

These laminated film products, which feature high functionality and a beautiful appearance, are widely used on kitchen doors, refrigerators, cabinets, and other furniture applications. Our products are available in different printed colors, designs, and patterns with different finishes including high-gloss and super-matte, providing a high degree of designability.

9 Compound for Syringe Gaskets and Tubes for Medical Applications

These products support the medical field. Gaskets using our materials boast outstanding low-speed sliding resistance, offering stability in the volume of medicine injected. Our products for medical tubes comply with various medical standards and have a track record of many years.

12 Antibacterial and Antivirus Film

These are films with a function that suppresses the growth of viruses and bacteria. RIKEGUARD® has received SIAA* certification, and we also handle compound-type products. We also have products with insect repellent and properties that reduce allergy substances.
